

We demand a People's Energy Plan that delivers clean, safe, affordable energy for all!

We believe everyone has the right to electricity!

We have a right to energy that is reliable and that does not pollute our air, water, and soil. We need protection from climate chaos. Even our government's own research shows that renewable energy will be cheaper, cleaner, and can end loadshedding sooner.

We demand a *People's Energy Plan* that listens to us and delivers a rapid and just transition to a more socially owned, renewable energy powered future, providing clean, safe, and affordable energy for all!

We demand affordable energy tariffs for all, and the delivery of an increased allocation of free basic electricity to those who cannot afford energy.

A genuinely just transition now!

As we transition to a low carbon future, no community or worker must be left behind! We must guarantee decent and dignified work and prosperous livelihoods for all those who are vulnerable in the energy transition. That includes the delivery of clean, safe, and affordable food, energy, water, and housing for all.

We demand a truly just energy transition and a prosperous future for all workers and communities dependent on coal and vulnerable in the transition.

Public investment for Socially Owned Renewable Energy now!

A better energy future is possible, if the government invests in a rapid and just transition to a publicly owned, renewable energy powered future, providing clean, safe, and affordable energy for all, with no community or worker left behind.

We demand massive state investment in a clean energy and climate jobs programme that delivers widespread economic opportunities, and helps tackle the climate crisis and the jobs crisis at the same time.
